

KEVIN KEIPER

SENIOR AI-NATIVE PRODUCT DESIGNER

kevin@kevinkeiper.com | www.kevinkeiper.com | 415-926-1935

Senior AI-native product designer with 10+ years owning ambiguous, data-dense design problems end to end for enterprise and B2B platforms, often as the sole or lead designer with minimal direction. I combine senior product judgment with AI-native execution — designing and shipping real products, not prototypes, using AI as a daily working practice rather than a novelty. I extend and strengthen design systems as I go, and mentor other designers to raise the bar around me. I deliver the business value of design, and the design of business value.

SELECTED ACCOMPLISHMENTS

- Designed and validated Neu/x, an AI-copilot concept that generates dynamic, goal-driven user flows, as capstone for a UX-for-AI certification, defining how users interact with an agent, how suggestions are structured, and how follow-on actions chain, then using ListenLabs and CoLoop to synthesize real and AI-generated interviews into a validated direction
- Built “Opportunity Radar” end to end, a git-versioned AI automation that scores companies by aggregated hiring signals across seven live data sources, prototyping the front end in Figma and building it out working directly with Claude
- Led design for internal underwriting tools at EMC Insurance, an enterprise B2B platform, owning an ambiguous, data-dense workflow problem end to end while coordinating with product and engineering to implement Angular Material components that closed design-system gaps and reduced rework and UI bugs
- Led UX for Impact Atlas, combining field research with dashboard and workflow design to make complex, technical data legible as decision support for a poverty-reduction platform in Bangladesh, helping distribute \$10M+ in program funds
- Led design as principal product designer at BrightPlan, building personas and journey maps to guide a financial wellness benefit platform now live in the Google Play Store, contributing to a 55% lift in employee engagement
- Contributed to Citi Bank’s private banking design style guide and component library, and a novel Figma Tokens design-system solution for client Neighborly, extending patterns that engineering teams composed from daily
- Lead designer for Rocket Lawyer’s native mobile app (live in the App Store), designing a structured, multi-step intake flow, including an Ask a Lawyer feature that matched users to attorneys, through journey maps and prototypes
- Mentored several Springboard bootcamp cohorts with a 100% graduation rate, coaching designers through feedback and critique to raise the standard of their work and connect craft decisions to business value

WORK HISTORY

Principal — Homebound.design Aug. 2022 – Present *Freelance design studio — website design and build, CRM email campaign management for clients across industries*

Mentor — Springboard Aug. 2022 – Sep. 2025 *Education provider — mentored future UX leaders across all design practices, with focused attention on maximizing the business value of design*

UX Strategy Consultant — Apex Systems (EMC Insurance) Aug. 2024 – Nov. 2024 *Staffing agency engagement — partnered with product, design, and engineering to overhaul large-group insurance underwriting tools*

Creative Lead — Photon Infotech Mar. 2022 – Mar. 2024 *Digital agency — contributed to Citi Bank’s private banking design style guide and component library, and a novel Figma Tokens design solution for client Neighborly*

Product Designer — Best Buy Nov. 2021 – Mar. 2022 (Contract) *Retail e-commerce — explored a dynamic, session-personalized site structure that would auto-tailor search results and navigation to each user, a concept now mainstream via AI-driven personalization*

Lead Product Designer — PG&E May 2018 – Nov. 2018 *California utility provider — designed a fully mobile contractor tool letting field teams allocate gas, water, and electrical service assignments directly to new construction sites, supporting site planning and build-out coordination*

Principal Product Designer — BrightPlan Mar. 2016 – Mar. 2018 *Fintech startup — designed the MVP of a financial wellness and investment application and its component library, which launched after my departure*

Principal Product Designer — Amplifier Strategies Jul. 2015 – Jan. 2016 *Digital agency — led UX for a poverty-reduction SaaS platform in Bangladesh, pairing rural field research with dashboard and workflow design*

Product Designer — PayPal Aug. 2014 – Jun. 2015 (Contract) *Fintech — designed a consumer account-funding retention flow for new PayPal accounts, including hand-sketched concepts for attaching funding instruments, to help first-time users get their account funded and active*

Sr. Product Designer — Rocket Lawyer Jul. 2012 – Apr. 2014 *Legal services — owned UX/UI for Rocket Lawyer's native mobile app, translating complex legal workflows into a shipped App Store product*
